

THRU : Assistant Director, ORR  
: Chief, Materials Division  
: Acting Chief, Solid Fuels Branch

1 August 1952

**Intelligence Coverage on Southern Rumania and Bulgaria.**

1. Solid fuels intelligence.
2. Adequacy of coverage: production - fair for totals and poor for regional or individual operations; uses by consumer categories, distribution, labor, and input requirements - poor.
3. Currency: Total production is current but other intelligence is three years back.
4. Available intelligence is fairly reliable.
5. No comment on unexploited sources.
6. Lack of information is regarded as only fairly critical in southern Rumania owing to the Ploesti oil fields in the area; however, this area produces about 80 percent of total Rumanian coal. In all Rumania, coal supplies 27 percent of total energy demands.

In Bulgaria, the lack of information is critical as coal supplies about 55 percent of total energy requirements. Hence transportation, and industry operation would be largely dependent on coal supplies.
